Capital and shareholder matters

The company is well capitalized under the Solvency II regime. Solvency capital requirement (SCR) ratio using standard formula is 196 % as of June 30th, 2018. The company's goal is to maintain a solvency coverage ratio (calculated according to the Solvency II regulations) above 150%.

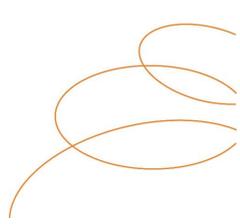

Prospects

The Board is not satisfied with the weaker claims results and is taking action to improve the insurance technical result, as a consequence the growth is expected to be lower going forward.

Uncertainty in claims development, and the inherent volatility of capital markets, continue to be the most important risk factors that could affect the company's profit in 2018.

The fair value of listed investments is based on the current sales price. Financial instruments measured at fair value are valued on a daily basis. Directly observable prices in the market are used as far as possible. The valuations for the different types of financial instruments are based on recognized methods and models.

Level 1 - Financial instruments valued on the basis of quoted prices for identical assets in active markets

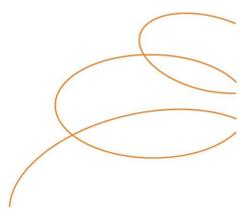

This category encompasses listed equities that over the previous three months have experienced average daily trading equivalent to approximately MNOK 20 or more. Based on this, the equities are regarded as sufficiently liquid to be included at this level. Bonds, certificates or equivalent instruments issued by national governments are generally classified as level 1.

Level 2 - Financial instruments valued on the basis of observable market information not covered by level 1

This category encompasses financial instruments that are valued on the basis of market information that can be directly observable or indirectly observable. Market information that is indirectly observable means that the prices can be derived from observable related markets. Level 2 includes shares or equivalent equity instruments for which market prices are available, but where the volume of transactions is too limited to fulfil the criteria in level 1. Shares in this level will normally have been traded during the last month. Bonds and equivalent instruments are generally classified in this level. Foreign exchange derivatives are classified as level 2. Fund investments are generally classified as level 2.

Level 3 - Financial instruments valued on the basis of information that is not observable in accordance with level 2

The instrument is included in level 3 if one or more essential data are not based on observable market data.
